Plant Maintenance Advanced

Comprehensive solution to cost reduction and operation optimization

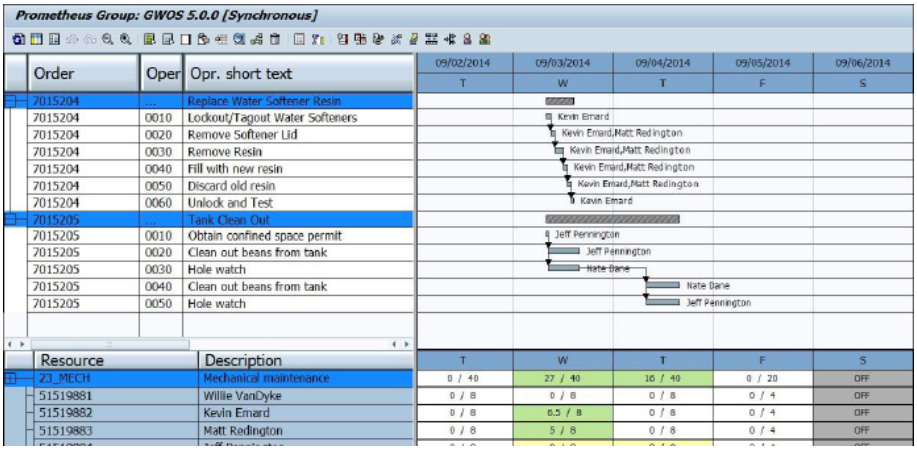
Maintenance practices in today's market have to be carefully tempered by considering costs. With smaller payrolls and higher production expectations, management must ensure high availability of equipment while tightly controlling costs. Prometheus Plant Maintenance (PM) Advanced frees up as much as 50% to 60% of maintenance staff time, enabling staff to concentrate on planning and scheduling. Most importantly, Prometheus solutions function within SAP, preserve data integrity, and allow changes to occur in real time. No additional hardware or middleware is required.

Prometheus PM Advanced allows you to:

Reduce screen time for personnel • See a visual layout of work order data • Schedule via drag and drop function • Print work packages with a single click in one PDF • Retrieve SAP material master numbers through an advanced multi-word, any-order search • Modify work orders and operations en masse • Issue schedules early • Reduce effort required to produce a schedule

PM ADVANCED FEATURES

- Graphical scheduler
- Navigator
- Material shopping cart
- Order to task list
- Order to BOM
- Work order mass change
- Print manager
- KPI reporting



The Graphical Work Order Scheduler within PM Advanced presents work orders in a graphical view, including the necessary resources versus available capacities.
