

# Extended Functionality

Add-on for Prometheus Planning and Scheduling for SAP

PROMETHEUS GROUP

+Extended Functionality (+XF) takes scheduling with Prometheus to the next level by adding advanced features to the Prometheus Scheduling board. Quickly simulate multiple “what-if” scenarios to evaluate alternative schedules. Manage large data sets with auto leveling to create and save scheduling algorithms to standardize and conform to industry best practices.

Leverage real-time reports directly from the scheduling board, including resource histograms, planned vs. actual work, and s-curve analysis to track progress and get ahead compliance short comings. Automatically display up to date work percent complete data from the field on the scheduling board to proactively respond to changes to the critical path.

## Key Capabilities

### Easy Editing

Drag and drop work orders

### Automate Scheduling

Auto-level schedules based on specific work criteria

### Track Progress

Run reports on planned and actual work

### Manage Critical Path

Track and automatically make adjustments to critical paths as you move work orders within the relationship path

### Leverage Data

View KPIs by running S-curve analyses for the daily schedule, and overtime

### Visualize Float

View critical path and float of activities

## Advantages

- Simulate Schedules: Assess “what if” scenarios by manipulating your schedule without making permanent changes
- Review Status Updates: Gain visibility of completed and remaining work
- Track Paths: Adhere to a project timeline by tracking critical paths
- Easily View Reports: Avoid exporting data by running metric reports directly from the planning board

*Prometheus solutions function within SAP, preserving data integrity and allowing changes to occur in real-time, while eliminating the need for additional hardware or middleware.*
