

The Prometheus-AI Platform integrates all of your enterprise asset management (EAM) software into one cohesive, scalable, simplified experience. The platform leverages powerful AI to offer unparalleled data visibility, communication, and consistency.

About the Prometheus Platform

Asset Performance Management

RapidAPM is an AI-powered predictive maintenance solution. It's sensor/ERP agnostic and pre-loaded with 3,000+ ML templates, enabling rapid deployment and delivering measurable value up to 12x faster than traditional APM solutions. Remote services are optional for fast, burden-free value.

Planning and Scheduling

GWOS-AI is a complete planning and scheduling solution built on 20+ years of real-world data. It automates tasks, guides users, and learns from completed work for greater accuracy and fewer disruptions. Heatmaps, drag-and-drop scheduling, mass change, and auto-leveling boost efficiency.

Mobility

Native mobile app for your iOS, Android, or Windows device. Technicians can work online or offline in real-time to perform a range of key asset management functions, including work order execution, routes and inspections, and inventory management.

Master Data

Capture, cleanse, enrich and standardize data across your EAM/ERP/CMMS with MDaaS to ensure a single, accurate source of truth. Powerful AI automates cleansing, enrichment, and BOM analysis to accelerate data quality, provide actionable insights, and reduce costly, manual data projects.

Permitting & Safety

ePAS streamlines permit creation, approvals, isolations, and risk assessments to improve compliance, reduce downtime, and enhance worker safety. With configurable workflows, mobile access, and real-time visibility, ePAS empowers organizations to enforce consistent safety standards across all operations.

Process Safety Management

RiskPoynt helps you proactively monitor and mitigate operational risks, reducing downtime and improving safety. It integrates with core systems, uses built-in models to standardize risk controls, provides real-time oversight of barrier health, and drives scenario-based risk validation to ensure safety is embedded in every decision.

Shutdown, Turnaround, & Outage Management

STO Manager is a single command center for the full lifecycle of your STO from planning, execution, to review. Manage scope and materials, track planning progress, improve communication, and collect real-time progress updates from the field.

Reporting & Analytics

Reveal actionable insights from real-time reports of companywide curated metrics. Reports can help you identify pain points and drive improvement in your company's asset management strategy.

Contractor Management

Manage all labor data and costs in one system. View time, attendance, fatigue levels, overtime, and contractor costs to improve your workforce management efficiencies. Can integrate with your ERP and HR programs to automate payment and tracking processes.

Project & Portfolio Management

Manage the initiation, approval, planning, execution, and completion of your projects all in one universal space. Easily view and update project progress to evaluate the current stage, next steps, and completion deadlines to keep your project on track and on budget.

Commissioning & Completions Management

Co-Console is a unified, digital platform for inspections, mobile forms, and progress tracking. It consolidates project breakdowns, documents, drawings, and user management into one system to eliminate paper, enhance data integrity, and give stakeholders real-time visibility across multiple projects.

Weld Management

Weld-Console digitizes and governs large-scale welding projects, converting complex welds into manageable daily tasks. Automate inspections, validate welder qualifications and material compliance in real time, and flag issues before they progress. Full traceability, configurable workflows, and robust reporting ensure consistency, compliance, and integrity.
