

# Why Mobile and Planning & Scheduling Solutions Should Be Linked Together

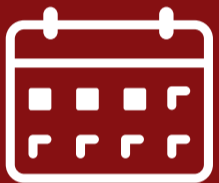

## MOBILE

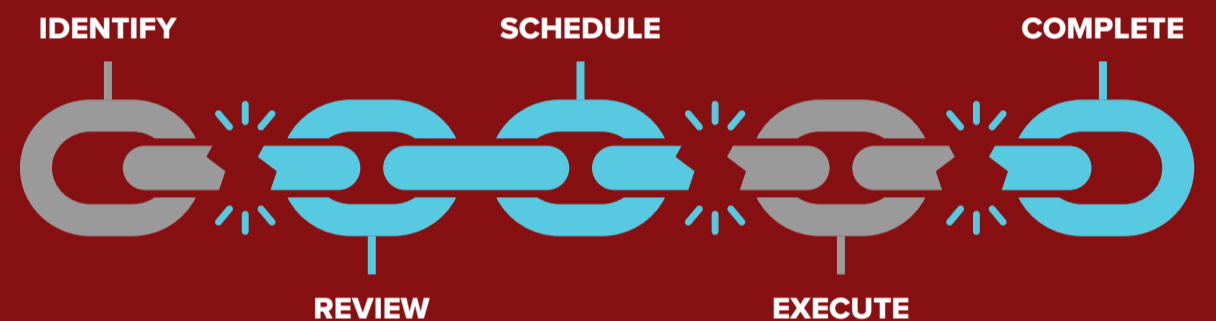

With a Mobile solution, you can enhance the accuracy of your maintenance information with real-time work identification and execution in the field, with or without Wi-Fi connection. Mobile can enhance the quality and speed of data coming into your ERP system, increasing visibility of key KPIs and improving reaction time. However, without efficient maintenance planning and scheduling, you can't act on notifications quickly.

## PLANNING & SCHEDULING

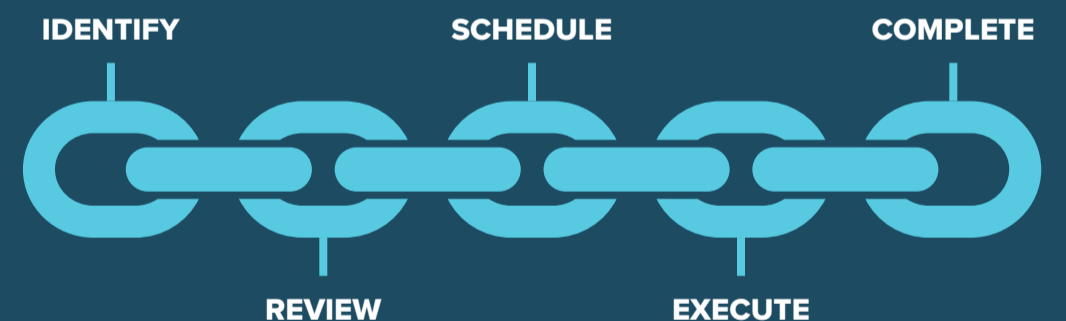

With a maintenance planning and scheduling solution, you can easily plan work in detail and schedule work efficiently. Standardizing your planning and scheduling workflow reduces confusion and increases schedule visibility on work to be done. However, without a Mobile device to standardize data coming in to your ERP, you can't trust the accuracy of your data.

## MOBILE + P&S

Streamline your work management process, improve efficiency, and enhance maintenance data quality by using Prometheus Mobile and Planning & Scheduling solutions alongside one another.

**With Prometheus Mobile + Planning & Scheduling, Brasil Terminal Portuário:**

**Reduced**  
their scheduling  
time by
