

Keeping maintenance data clean and accurate is difficult when technicians must wait until they go back to the office to enter data. With Prometheus Mobile Plant Maintenance (PM), technicians can enter data at the source. The system allows you to view and create work orders from the field, quickly and easily enter time confirmations, and check new notifications in real-time.

Prometheus Mobile PM connects directly to your ERP system and works online and offline, so end-users can execute work more effectively by staying connected at any location and saving time logging data.

Key Capabilities

Create, update, and submit notifications and work orders from the field

Manage the application layout and configuration directly

Search and view master data, like equipment and material details

Record measurement points

View inspection lists and measurement history

Populate work list from multiple sources

Confirm time following standard SAP confirmation procedures

Access to work order information and documents, including shop papers, drawings, and permits

Access equipment historical data and operations details

Sign documents electronically

Advantages

- Reduce equipment downtime and improve reliability
- Increase wrench time by finding documents and materials quickly
- Increase user adoption and decrease overall training time
- Improve data integrity by entering at the transaction point
- Facilitate exacting standards across the company

Prometheus Mobility for Plant Maintenance streamlines workflow processes to eliminate redundancies and drive operational excellence.
