

Co-Console is a comprehensive solution that allows you to design, control, and execute all stages of your construction and infrastructure project planning from your mobile device, online or offline. The system provides up-to-date information on the status of your project.

Users can view daily instructions within Co-Console to ensure that stages are complete before each project turnover.

Utilize the mobile solution to access mobile forms as well as check reports on the progress of your project.

Key Capabilities

Project Browser

View commissioning systems, milestones, modules, work packages, and equipment tags. Check inspection, test, and certification requirements.

Reporting Integration

View reports on summaries such as “progress by discipline” by connecting with systems like PowerBI and Tableau.

Mobile Forms

Build your own forms, electronically sign forms, review report progress, print completed forms to PDF, and add PDFs to an electronic turnover dossier

Project Management

Design, control, and execute all stages of your construction project from inspections, precommissioning, commissioning, project completion, and turnover all within the system.

Straightforward Interface

Import modules, define/print packages, upload scanned field documentation, and follow commissioning procedures. Perform punching, preservation, reporting, certification, and scope locking straight from your device.

Advantages

Single point of truth: Allows you to view the status of technical and contractual project completion.

Manage stages: Enables you to complete and transition FAT, receipt, installation, function testing, and energization.

Monitor individual equipment: Helps you review critical steps and keep the process simple and straightforward.

Increase safety and compliance: Reduces the risk of late project delivery by measuring construction progress.
