

Document Management integrates with your document management system (DMS) to allow you to load design drawings and add additional construction/commissioning data such as sub-system scoping and test packaging data. The system also scrapes documents for tag data and highlights differences in drawing versions.

Provides ease of use to all stakeholders of the project, including information managers as well as your construction and commissioning site teams.

Utilize Document Management to markup drawings, compare documents, verify tags, and incorporate changes. Use built-in revisioning to seamlessly manage complex scope, such as sub-systemization or piping test packaging.

Key Capabilities

Digitalizes Drawings

Takes your drawings and designs and rolls them out to the construction sites for easy visibility.

Highlight Differences

Helps you analyze differences between drawing versions to save you even more time.

Change Management

Allows you to view highlighted differences between designs and update subsystems and piping test packages.

DMS Integration

Enables you to transfer and import documents from your own document management system (DMS) and turn them into PDFs, whether they're created in-house or externally.

Improved Tagging

Increases the quality of tag data, verified tagging specifications, and the ability to incorporate changes, resulting in a reliable digital information set.

Advantages

Straightforward transferring: Helps you manage your projects easily. Once completed in the field, inspection packages, including check sheets and as-built drawings are seamlessly rolled up into electronic turnover dossiers for handover.

Manage key details: Allows you to drill down into detailed drawings such as isometrics to continue to markup boundaries, add materials, and create notes.

Work electronically: Enables you to check drawings from your own document server or verify design reliability and rollout scope to the worksite digitally and effortlessly.

Electronic verification: Helps you view highlighted anomalies to correct as needed.
