

Preventive Maintenance Management

Add-On for Prometheus Planning and Scheduling for SAP

PROMETHEUS GROUP

It is no secret it is less expensive to prevent and issue than it is to deal with a breakdown. Building a good weekly schedule will help to achieve this, but there needs to be a focus on the maintenance plan strategy, which provides the foundation of all planned maintenance. Unfortunately, accessing and consuming all of this data is a daunting task in ERP systems.

Prometheus Group's Preventive Maintenance Management add-on enables planners and schedulers to make better decisions and to more effectively schedule work by integrating maintenance plans along with routine maintenance in one graphical scheduler

Key Capabilities

Prometheus solutions function within SAP, preserving data integrity and allowing changes to occur in real-time, while eliminating the need for additional hardware or middleware.

Forecast capacities of uncalled maintenance plans

Release, skip, or fix calls from the Gantt Chart

Level maintenance plans before they are generated into work orders

Seamlessly update and maintain maintenance plans, task lists, and operations

See future preventive planning along with routine work

Directly mass edit maintenance plans from a tabular view

Advantages

- Save time, maximize resources, and reduce downtime
- Ensure maintenance plans are synchronized and standardized across your plants
- Increase visibility of your plans with an extended-forecast lookahead
- Keep your backlog clean by projecting capacities without creating a work order, and integrating uncalled plans with routine work
- Align maintenance plans with emergent work or downtime
- Perform mass changes to maintenance plans and task lists for continuous improvements while ensuring consistency
- Take advantage of downtime by calling related maintenance plans early
