

Prometheus ePAS Mobile puts essential tools such as isolation management directly into the hands of frontline operators. This means isolation point verification can be managed through mobile scanning out in the field, reducing the time taken and providing a more holistic insight of work being performed.

The ePAS system can be used online and offline, and with full functionality on a range of mobile devices and operating systems including iOS, Android, and Windows devices of all sizes.

## Key Capabilities

Mobile scanning for isolations in the field, using barcodes, RFID, QR codes, bluetooth, and more.

Overcome process bottlenecks by capturing and uploading photos, videos, and documents in the field.

Display and enter operations and EHS data from across the corporate network.

Fully scalable and adaptable as you move forward on your digital transformation journey.

Isolation point verification can be managed through mobile scanning out in the field.

## Advantages
