

Prometheus ePAS Safety Process Support gives you even more visibility and control into your isolation, lockout tagout, and other control of work processes. An effective integrated safe system of work (ISSOW) with the right processes in place helps manage risk, increases safety, and improves productivity, cost efficiency, and quality.

Key Capabilities

Improves Management of Change with clear overview of change requests and a configurable workflow and approval cycle.

Operational Risk Management ensures correct risk assessments are being carried out.

Advanced auditing features, including performing audits on safety documents and configurable workflows and questions.

Complete visibility into hazards and controls, as well as a configurable field-specific phrase library.

An effective integrated safe system of work improves productivity, cost efficiency, and quality.

Advantages

Dashboard KPI for performance and deviations

Includes commercial and technical authorization

Real-time implementation tracking

Set and review assessment scoring for pass or fail

Prometheus ePAS solutions consist of adaptable, scalable, mobile-enabled environmental health and safety software that streamlines workflows, enforces safety measures and compliance, and enhances collaboration between your EHS, maintenance, and operations teams with real-time access to information.
