

Prometheus ePAS Smart Log is a powerful shift handover and operational logging tool for effective communication. At the start of every shift, your teams need to know what has happened, what work is being carried out now, and what's potentially in the pipeline during upcoming shifts. Prometheus ePAS Smart Log delivers clear, comprehensive operational event logging and reporting tools that work with you round the clock, to ensure shift handover, safety, commercial and environmental issues are instantly recorded and actioned.

This fully configurable digital operations logbook system eliminates the challenges of paper-based logs, spreadsheets, and isolated databases, and connects information from many different sources in one central location to give real-time event visibility across your organization.

Key Capabilities

Capture and share critical information from each shift, including notifications and escalations.

Build business processes and logic into each event, reinforcing operational standards and traceability.

Capture defects and operational problems and assign solutions.

Access powerful tools for dynamic KPI tracking and reporting.

Improve safety with safety audit logs, and accident and incident tracking and reporting.

Eliminates the challenges of paper-based logs, spreadsheets, and isolated databases.

Advantages

- Eliminates control room paper logbooks and spreadsheets
- Saves hours of preparation time and enhances plant communications
- Make proactive decisions based on real-time visibility across all sites
- Capture and report defect and operational problems and track actions
- Ensures consistency and best practice across the plant by every operator
- Highlights critical information across shift handovers
