

PROMETHEUS GROUP

# 2021 Virtual User Conference

Join us for our virtual learning event

May 4<sup>th</sup>–5<sup>th</sup>

## Why Attend?

The Prometheus Group User Conference is the go-to event for EAM professionals to stay up-to-date with maintenance and reliability best practices, learn about innovative products that can solve real world challenges, and get advice and insight from experts in your industry.

**This year, our user conference is a free, online event.** This isn't your typical virtual conference; it's an interactive experience that will leave you with valuable information to bring back to your organization.

- **Industry Specific Topics:** From Planning and Scheduling to Master Data and everything in between, whether you want to learn how to get even more out of the Prometheus solutions you already have, or discover other elements in the Prometheus Platform, there's a session for you.
- **Product Roadmap:** We are always working to extend and enhance what we offer our clients. The PGUC is a great opportunity to learn about new features and functionality we've added to our existing products, new solutions that we've built for the platform, and what we're working on for 2021 and beyond.
- **Customer Speakers:** We believe the best learning comes from real-world examples. Hear from other customers just like you about how they are solving their asset management challenges and attaining their goals with creative problem-solving, best practice implementation, the right tools, and support from their Prometheus Group teams.

## Hot Topics
