

CITGO's Turnaround Material Management With STO Manager

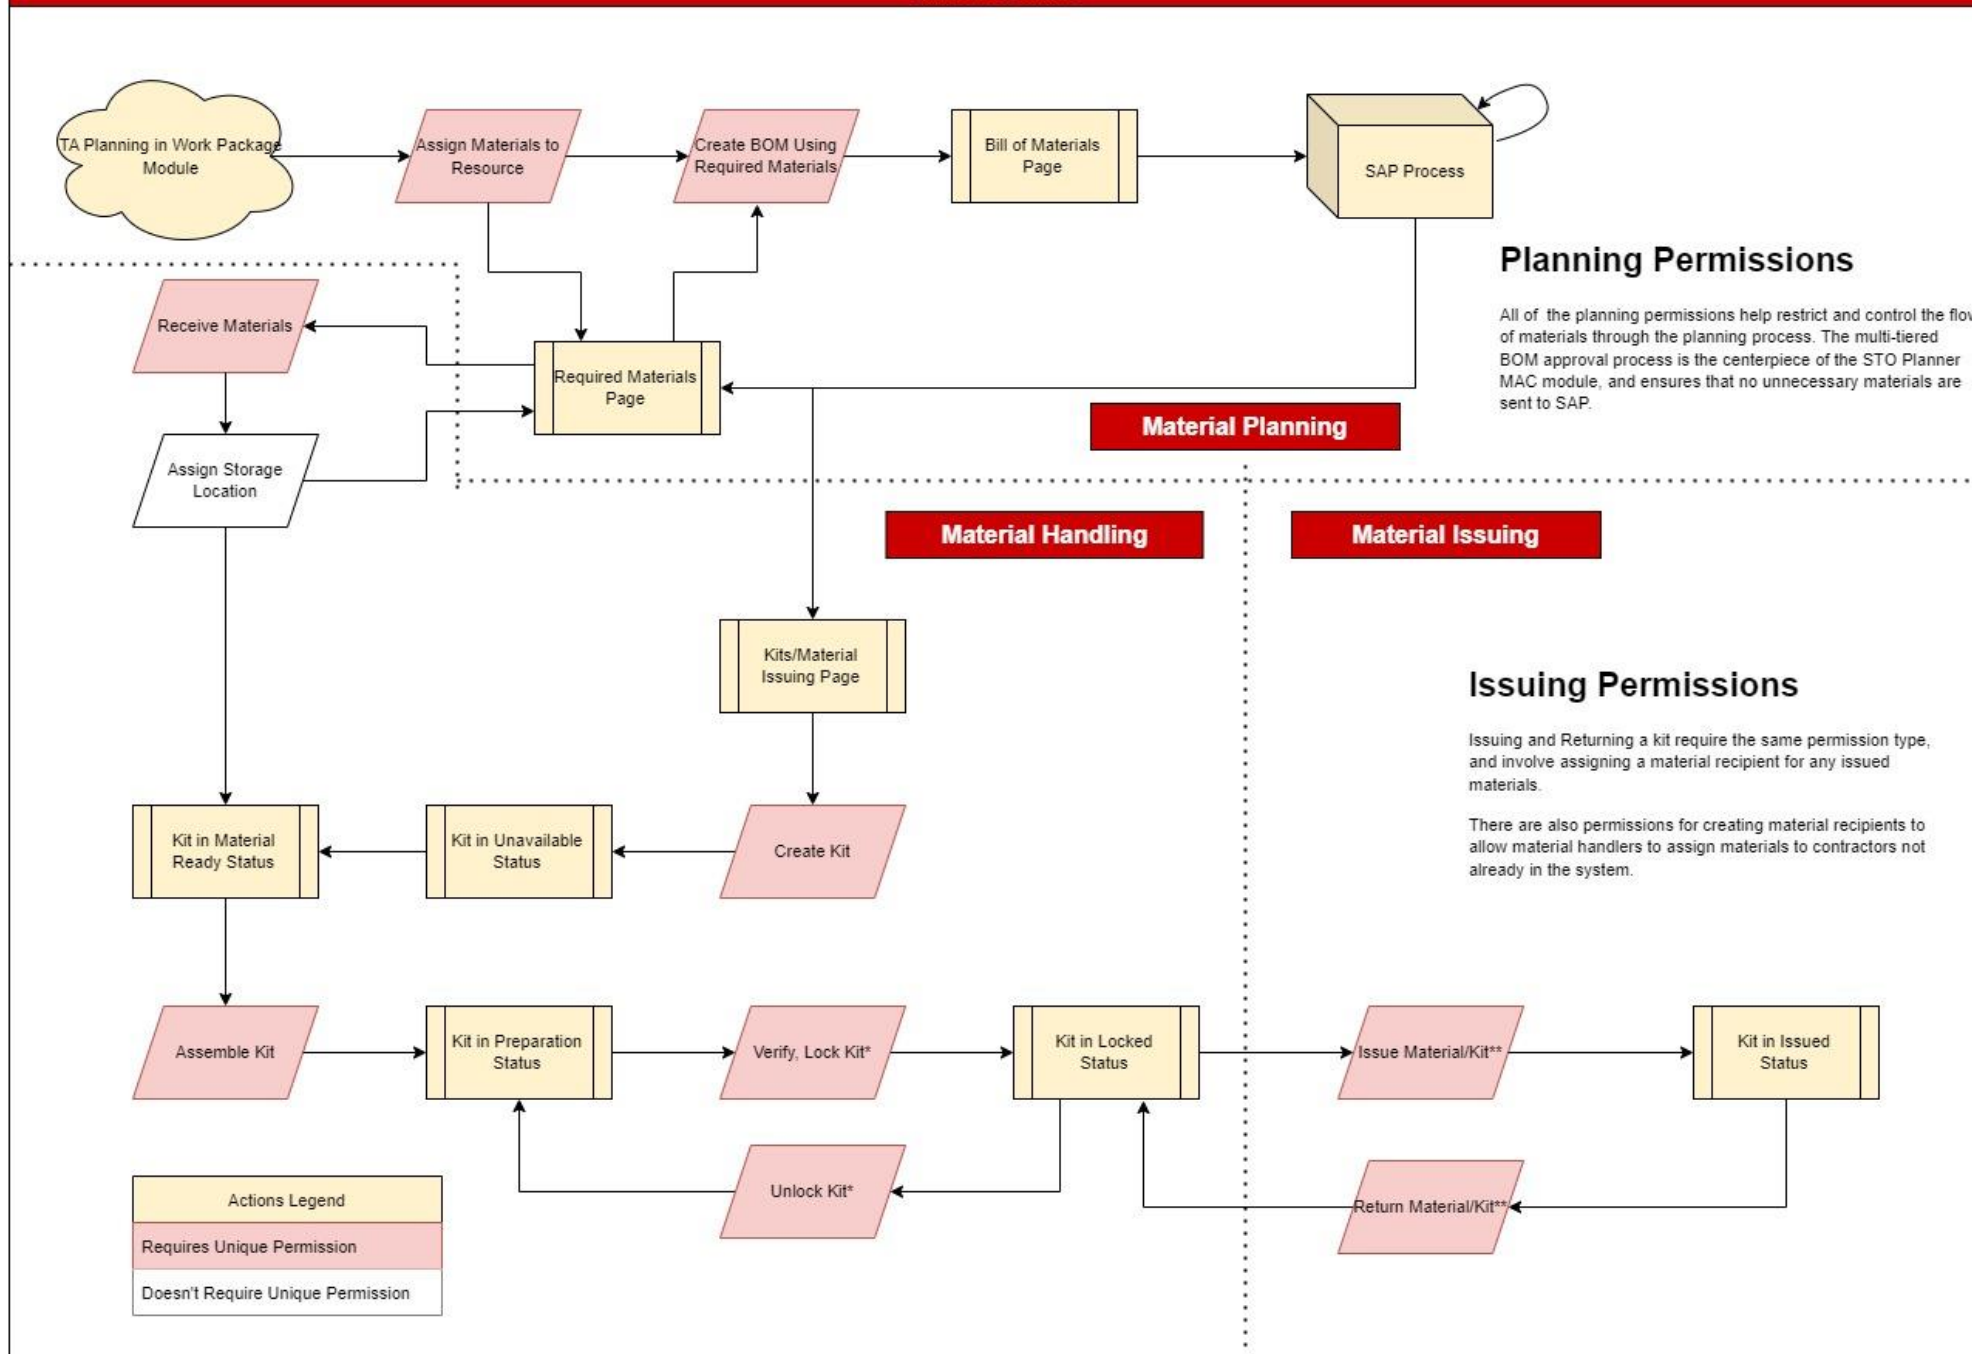

Leah Tellez – CITGO

Herbert Davis – Prometheus Group

April 19, 2023

Challenges

- Methodology to planning is dated and not advantageous for downstream activities.
- Concerns about the amount of waste due to contractors losing materials.
- No Native SAP functionality to Track Materials post goods receipt.
- A centralized application that manages planning, ordering, tracking, and issuing materials.
- Primavera P6 doesn't have a concept of Materials.

Planning Permissions

All of the planning permissions help restrict and control the flow of materials through the planning process. The multi-tiered BOM approval process is the centerpiece of the STO Planner MAC module, and ensures that no unnecessary materials are sent to SAP.

Issuing Permissions

Issuing and Returning a kit require the same permission type, and involve assigning a material recipient for any issued materials.

There are also permissions for creating material recipients to allow material handlers to assign materials to contractors not already in the system.

Actions Legend	
	Requires Unique Permission
	Doesn't Require Unique Permission

Key Benefits

- Track Materials post goods receipt to STO-specific location
- Group and kit materials OR individually issue
- View Material status in STO Execution to ensure that 36 hour lookahead has materials ready
