# Key Customers

# The Prometheus Platform

# Mobility Trends in Plant Maintenance

- Digital Transformation and Mobility are the dominating trends in the Maintenance industry
- Increased focus on User Interface and User Experience (UI/UX) rather than solely focusing on functionality
- Offline functionality is becoming more of a priority, even as plants become more connected
- Number of people retiring outnumbered people entering workforce

# What Makes a Mobile App 'Usable?'

- Intuitive interface
- Accessibility across operating systems
- Utilization of native tools
- Seamless data flow
- Intuitive workflow that adheres to business processes
- Feedback loop – ability for business to make adjustments as application is used in practice

## Interactive Session

# The Importance of Configuration

- The application should adhere to, and enforce your business processes; not the other way around
  - Who configures the app: Vendor, IT, or the business owners of the users using it?
  - What is the lead time when configurations are approved?
- Are these configurations flexible enough to only affect targeted groups/locations?

## Interactive Session

## Customer Testimony

PROMETHEUS GROUP

Derek Shickel – Sr. Product Lead  
Jonathan Addison – Functional Consultant
