

Prometheus Master Data as a Service

Overview

Master Data Management is crucial in streamlining maintenance work and requires a process for data cleansing and sustainment. Prometheus Master Data as a Service (MDaaS) supports both by providing a standardized taxonomy, with all cleansing and sustainment being done as a subscription service. This web-based data governance solution integrates your master data across all systems, work categories, and teams making the data accessible and manageable for good.

With Prometheus MDaaS, we're able to collect, optimize, and organize data across the organization within one standardized system improving maintenance and reliability. Instead of having multiple services manage data and the analytics from that data, we bring it all under one roof.

Features

- Standardize and cleanse master data without the need of an expensive and lengthy cleansing project
- Includes a standardized taxonomy, leveraging governed standards like ISO 14224
- Included governance solution ensures all new records are created to standard
- All data is integrated with your ERP / CMMS
- Aggregate database is continuously monitored and improved by Prometheus Group's team of functional consultants and data scientists

Standardized

- Long and short descriptions
- Translations
- Classes and characteristics
- Noun/modifier dictionary
- Catalog profiles
- Object part, damage, cause, activity codes
- Maintenance plans and task lists
- Measurement points and value thresholds
- Bill of materials

Summary

No more long and expensive cleansing projects. End organizational data governance and stop managing your own taxonomies. Subscribe to Prometheus MDaaS and get back to focusing on what you do best.
