

Prometheus Planning and Scheduling for Maximo

Prometheus Planning & Scheduling for Maximo (AKWIRE) provides cutting edge solutions for the management of daily/weekly maintenance, preventive maintenance, resource availability, job plan refinement, time capture and shutdowns/turnarounds/outages.

This out-of-the-box solution streamlines and enhances maintenance processes by utilizing applications that fully integrate with your system of record to keep a single source of truth for your data. The Prometheus graphical scheduler and intuitive heat map leads to a more proactive maintenance program by increasing the efficiency and effectiveness of your planners and schedulers.

Solutions

The Planning & Scheduling for Maximo module (AKWIRE) is comprised of these core solutions that work together to optimize and streamline the work order scheduling lifecycle.

vScheduler - Comprehensive planning and scheduling in an easy to use graphical format. vScheduler will not interfere with Maximo performance regardless of the size of the data sets you're working with.

vCalendar - Provides a simple GUI that allows you to view labor, craft, and crew calendars and modify their availability with a single click. Simplify the process of scheduling with calendars that can be easily maintained.

vJobPlan - Provides a configurable, detailed view of your Maximo Job Plans, allowing you to quickly determine where duration and timing changes would increase the accuracy of your scheduling activities.

vTimeSheet - Provides a side-by-side view of Planned hours vs. Actual hours; workers only need to modify records where deviations exist.

Advantages

- Installs and upgrades with no Maximo downtime
- Graphically view and schedule work order data
- Intuitive color coded heatmap to easily identify under/over allocation
- Handles large amounts of data without affecting Maximo performance
- Maximize resource utilization and wrench time
- Increase schedule and PM compliance
- Reduce reactive work and increase preventive work
- Seamless integration with the Prometheus platform
