

Prometheus Planning & Scheduling for Maximo (AKWIRE) offers an out-of-the-box solution that streamlines maintenance processes and increases the functionality of your Maximo system. The solution includes tools to improve and enhance every stage of the maintenance workflow, all while keeping a single source of truth within Maximo.

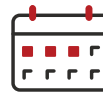

Key Capabilities

Prometheus Planning & Scheduling for Maximo is made up of four key modules designed to integrate with each other and Maximo.

vScheduler

Comprehensive, powerful, and easy-to-use planning and scheduling tool that allows for virtually any size data set without impacting Maximo's performance: the graphical scheduler and intuitive heat map make it easier than ever before to improve the accuracy and efficiency of your planning and scheduling

vCalendar

Graphic interface that provides insight into labor, craft, and crew calendars, and gives you the power to modify them with a single click

vJobPlan

Configurable, detailed views of your Maximo Job Plans allow you to quickly determine where duration and timing changes will increase scheduling accuracy

vTimeSheet

Provides a side-by-side view of planned hours vs. actual hours; workers only need to change records where deviations exist

Unlike other Maximo enhancement platforms, Prometheus Planning & Scheduling for Maximo offers:

- Low code configurability that allows for a quick implementation
- Intuitive interface maximizes the information you see on one screen

Advantages

- Dramatically increases the functionality of Maximo
- Reduces downtime on critical assets
- Drives increased wrench time and resource utilization
- We partner with IBM to ensure our products are always compatible with Maximo
- Easily identifies under/over allocation of resources through an intuitive heat map

Prometheus solutions streamline workflow processes to eliminate redundancies and drive operational excellence.

The vCalendar tool of Prometheus Planning & Scheduling for Maximo (AKWIRE) allows teams to manage, edit, and share calendars and availability in seconds. Relying on an intuitive graphical user interface, users have increased visibility into the shift schedules of workers or crafts allowing for more control over time and resource management.

With a user-friendly, easily configurable interface, an organization can efficiently leverage vCalendar to make seamless calendar changes without ever having to negatively disrupt workflow or schedules.

Key Capabilities

Manage multiple calendars and calendar exceptions on a single screen with minimal clicks

Quickly find different groupings of crafts to view their assigned calendar and labor availability

Assign multiple calendars to a worker or crafts in real-time or on a recurring basis using Multi-shift support

Enter exceptions against multiple resources, for multiple time periods

Easily configurable reason codes

Manage or edit a worker's calendar, shift, supervisor, crew, availability, and push updates to Maximo

Additional add-on features to better manage calendar exceptions

Export calendars to Outlook

Benefits include increased synchronization between workers, crews, and schedules/calendars, higher productivity, and reduced stress.

Advantages

- Configurable and searchable to fit an organization's on-calendar management system
- Robust Multi-shift support helps maintain order when working with multiple dynamic calendars
- Easily manage all worker and craft calendars from a single interface
- Maintain scheduling accuracy with visibility into any calendar updates or changes to keep workers and crafts on the same page

Prometheus solutions streamline workflow processes to eliminate redundancies and drive operational excellence.

[LEARN MORE](#)

A solution that provides a scheduling team with an effective process to submit accurate and complete job plans can positively maximize labor utilization, workforce efficiency, and equipment uptime.

The vJobPlan tool of Prometheus Planning & Scheduling for Maximo (AKWIRE) gives you a configurable, detailed view of your Maximo Job Plans, allowing you to quickly determine where duration and timing changes would increase the accuracy of your scheduling activities. Embedded analytics give you the power to compare planned hours vs. actual for continuous improvement of your job planning activities.

Key Capabilities

Side by side views of planned task hours vs actual hours

Carry out mass updates to one or many job plans

Track and find seldomly used or unused job plans

View and edit multiple job plans on a single screen

Side by side views of planned task hours vs. average of actual hours over time allow a user to quickly assess the accuracy of existing plans

Mass update a selection of Job Plan records to standardize verbiage, supervisors, craft requirements, and more

Compare planned hours vs. actual for continuous improvement.

Advantages

- Review and revise your job plans quickly and easily
- Update job plan hours with a single click
- Configure and access analytics data to assess job plan accuracy or any other metrics
- All changes process through Maximo's MBOs Analytics

Prometheus solutions streamline workflow processes to eliminate redundancies and drive operational excellence.

The benefits of integrating maintenance scheduling best practices include increased uptime, more productive technicians and craftspeople, increased safety, and reduced stress. Complementing your Maximo system with a scheduling solution that is configured to work with your processes, rather than changing your processes to work with your scheduling solution, provides a quick implementation and near immediate ROI. The vScheduler tool of Prometheus Planning & Scheduling for Maximo (AKWIRE) offers the features maintenance organizations need in a comprehensive scheduling tool and presents all the required information in an easy to use graphical format.

Key Capabilities

Automatic recalculation of 50+ metrics in real time

Daily Work Sheet supplies simplified Excel-based templates for quick and easy assignments

Handles large data sets without interfering with Maximo performance

Receive instant notifications when break-ins and break-outs occur

Forecast thousands of PMs (preventive maintenance tasks) for any time period in seconds

Comprehensive planning and scheduling in an easy to use graphical format

Benefits include: increased uptime, higher productivity, and reduced stress.

Advantages

- Share labor across multiple Work Zones
- Automates routine tasks, providing more time for planners and schedulers to concentrate on core duties
- Add any field without a code change, including calculated and derived fields that don't exist in Maximo
- Workload heat maps provide an accurate view of workforce availability
- Create a PM forecast schedule without creating a single work order in Maximo beforehand

Prometheus solutions streamline workflow processes to eliminate redundancies and drive operational excellence.

[LEARN MORE](#)

The vTimesheet tool within the Prometheus Planning & Scheduling for Maximo (AKWIRE) solution is designed to seamlessly integrate with Maximo and offers increased oversight over the time management of a technician or craft. vTimesheet provides users with the flexibility needed to view, change, approve, and share time entries or hours of workers and crafts. With this tool, teams can improve time accuracy on jobs worked and better manage worker and craft productivity.

Key Capabilities

Single-screen time entry and approval

Self-entry of hours worked or completed

Management can enter, revise, approve, and track times for individuals or large groups

View and modify hours for technician or craft over a selected period

Summary rows ensure the correct hours are entered

Accept hours as reported, or modify actuals and publish back to Maximo

User-friendly interface

Navigate quickly to a desired date with minimal clicks

vTimesheet gives users access to a single-screen time entry and approval tool.

Advantages

- Eliminate duplicate data entry
- Easy to learn, straightforward functionality
- Ensure all work is properly recorded
- Change work order status for single or multiple records
- Modeled on an Excel sheet to provide familiarity, but with much more powerful tools

Prometheus solutions streamline workflow processes to eliminate redundancies and drive operational excellence.
