

Oracle eAM is an excellent overall enterprise asset management application. However, when it comes to performing detailed work scheduling and resource optimization, some organizations prefer to use specialized best-of-breed applications such as Oracle's Primavera P6. This is especially true with regard to larger and more complex volumes of work such as plant shutdowns, turnarounds, and outages that require sophisticated schedule logic ties and resource leveling capabilities.

Integrated Maintenance Planning & Scheduling

Maxavera provides a plug-and-play integration between Oracle eAM and Primavera P6. Within hours of installation Maxavera will be intelligently transferring work orders, tasks, labor, crafts, equipment details, and other Oracle eAM information to Primavera P6 where work can be scheduled and resources optimized. Maxavera then automatically sends relevant updates to the schedule, logic, and resource assignments back to Oracle eAM, keeping the two systems in sync.

Key Capabilities

Add the scheduling power Primavera P6 to your Oracle eAM system

Get control of your capital projects

Create best-of-breed solution for maintenance and project controls

Reduce schedule backlog

Optimize resources and logic

Improve visibility

Improve maintenance planning and scheduling

Increase wrench time/reduce craft downtime

Improve plant shutdowns, turnarounds, and outages

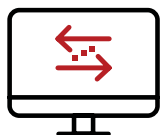

Features

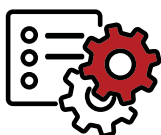

Plug-and-Play Solution

Maxavera delivers more than 90 percent of your Oracle eAM Primavera integration requirements the day it is installed. It includes hundreds of predefined best-practice field mappings, rules, transformation logic, and run-time options that have been refined through years of delivering real-world solutions to companies like yours all around the world.

Industry-Leading Functionality

Maxavera is an enterprise-class solution that includes all the required features and functions to meet your integration requirements. Users can run their own customized ad-hoc integration jobs from Maxavera's web-based consoles or schedule jobs to run automatically.

A Complete Solution

Maxavera provides an end-to-end solution for Oracle eAM and Primavera P6 integration. Maxavera is based on open standards and will run on any J2EE compliant application server platform including Apache Tomcat, BEA WebLogic, and IBM WebSphere. You are free to choose the platform that is right for your enterprise — and protected if you change your mind in the future.

Version Freedom

Maxavera utilizes a loose coupling architecture. This makes Maxavera independent from either side of the integration equation (Oracle eAM and Primavera P6) which eliminates the risk of version incompatibilities. With Maxavera, you can mix and match versions as your business requires and feel free to upgrade your systems independently without the risk of “breaking” your integration.
