

Prometheus Mobility

The Prometheus Mobility solution helps workers see, record, and update data automatically from the field using their phone, tablet, or computer, improving data accuracy and quality. Mobility sends maintenance data directly to an organization’s EAM, ERP, or CMMS (e.g. SAP, IBM Maximo, etc.), maintaining it as the single source of truth, as well as to other solutions in the Prometheus Platform.

The mobility solution works across multiple operating systems (Windows, Android, iOS). It enables maintenance personnel to enter vital information online or offline and automatically syncs once connectivity is restored. Having immediate access to data in the field reduces the time spent walking to and from a computer or across the plant floor or relying on supervisors for more information.

Key Products

Prometheus Mobility comprises these integrated products.

Mobile Plant Maintenance - Easy online/offline access to tools needed to execute work orders, such as: notifications/work requests, work order planning, work packages, time entry, markable image attachments

Mobile Production Execution - Timely access to information with the ability to view production orders, documents and more

Mobile Inventory Management - Easily track, count, and update inventory as it moves locations, keeping records accurate and helping to eliminate shortages

Mobile Operator Rounds - Input data relating to the operating condition of equipment (e.g. checklists, log history to track OEM (Original Equipment Manufacturing)).

Mobile Permitting - Create and manage work permits, isolations/LOTO (lock-out tag-out), handle risk assessment and integrate with other work management processes, such as plant maintenance

STO Execution - Integrate and extend existing systems to create a unified command-and-control center for managing shutdowns, turnarounds, or outages

Key Benefits

- Increase use adoption with a people-driven interface that is sleek, dynamic, and intuitive so that users can get to the right work with minimal input
- Streamline work processes and improve wrench time with offline accessibility
- Create consistency with configurable, intelligent solutions
- Improve visibility and communication by integrating with other solutions in the Prometheus Platform, as well as your EAM/CMMS
- Relieve the IT team of hosting concerns and issues
- Decrease paper use and paper-related problems
- Save time, money, and resources by improving data accuracy
