# The Prometheus Platform

The Core of Your Digital Transformation

The Prometheus platform is a scalable environment that integrates all your enterprise asset management (EAM) software into one cohesive, streamlined, simplified experience. Joining all your asset management solutions from Routine Maintenance to Analytics (and everything in between), the Prometheus platform offers unparalleled communication, data visibility, consistency, and connection.

Routine Maintenance

Master Data Governance

Mobility

Turnaround & Outage Management

Permitting & Isolations

Reporting & Analytics

SAP® Certified
Integration with SAP® S/4HANA

IBM Business Partner

ORACLE Gold Partner

SAP Partner

About the Prometheus Platform

The Prometheus platform is made up of six interconnected core modules to support your enterprise asset management lifecycle end-to-end.

Routine Maintenance

The leading graphical planning & scheduling software suite loaded with time-saving features and intelligent tools. With configurable heatmaps, drag and drop scheduling, mass change, auto-level, and more. Routine Maintenance enables a proactive maintenance strategy and improves efficiency.

Mobile

With intuitive user interface and online/offline capabilities, Prometheus Group's native mobile app for ioS, Android, Windows and more connects maintenance technicians in the field with your EAM, ERP or CMMS. In real-time, technicians can perform a range of key asset management functions, including work order execution, routes and inspections, and inventory management.

Permitting & Isolations

Use ePAS to drastically reduce the inefficiencies, frustrations, compliance issues, and potential dangers of paper permitting, while also managing isolations/LOTO (lock-out-tag-out), risk assessments, and more. The ePAS Mobile application works online or offline allowing your users to continue safe work practices, no matter what the connectivity.

Reporting & Analytics

Reporting & Analytics quickly reveals actionable insights from real-time reports of company-wide curated metrics. Reports can reveal crucial information to identify pain-points and drive improvement in your company's asset management strategy. Your dedicated Prometheus Data Analyst is available to take your reporting to the next level.

Turnaround & Outage Management

Turnaround & Outage Management provides a single command center for the full lifecycle of your Shutdown, Turnaround, or Outage from planning through to execution and review. Manage scope and materials, track planning progress, improve communication, and collect real-time progress updates from the field.

Master Data Governance

Gather data from across the Prometheus Platform (and your EAM/ERP/CMMS), cleanse and standardize it for actionable insights. Ideal for new EAM implementations and for mergers and acquisitions, Master Data Governance ensures your single source of truth is accurate.
