

Prometheus Platform | Planning & Scheduling

The Prometheus Platform's Planning & Scheduling module provides web-based planning and scheduling products for maintenance management. It is an out-of-the-box solution that streamlines maintenance processes by using applications that fully integrate with your ERP/EAM system, keeping it the single source of truth for your data. The solution enhances and extends your ERP/EAM system with a graphical maintenance scheduler, short cuts to saved searches in and out of the main system, a faster way to print work packages, and more. It maximizes your planners and schedulers efficiency on the job and can lead to a more proactive maintenance strategy.

Products

The Planning & Scheduling module is composed of these core products that work together to optimize and streamline the plant maintenance lifecycle.

Navigator - Transform your SAP Favorites list to a custom layout with built in variants that allows you to navigate your workflow more efficiently.

Scheduler - Take control of your planned work with an easy-to-use graphical scheduler that includes mass change to quickly update multiple works order all at once.

Order Planner - Optimized work order planning tool that takes you out of the GUI and onto the platform when planning your work.

Order to Task List & BOM - Streamline order planning by copying work orders to task lists and BOMs for future use.

Material Shopping Cart - Save time finding parts and reduce free text spending with this easy to use material search.

Work Package Manager - Receive all shop papers and documents needed to create your work packages.

Key Benefits

- Provides integration with all Prometheus Products
- Modern graphics and user interface
- Visual layout of maintenance work data
- Maximize resource utilization
- Reduce work package printing time
- Standardizes work planning
- Increased schedule alignment and adoption
- Reduction of reactive work and increase of preventative work
- Increased user adoption with simplified user interactions
