

Prometheus Rounds

The regular inspection of equipment is crucial to running a safe and efficient operation. Prometheus Rounds mobilizes your workforce and eliminates paper checklists to ensure consistency and best practices are enforced across the plant. Safety-critical and process data is validated immediately, and the application can guide the user through alternate workflows when exceptions are recorded. Improve compliance, accountability, and increase plant productivity with Prometheus Rounds.

Core Functionality

- Sync readings with any ERP, EAM, or CMMS data points to drive condition-based maintenance
- Incorporate system tolerances to facilitate appropriate corrective actions
- View historical data trends to proactively identify discrepancies
- Create work requests directly in your ERP, EAM, or CMMS
- Link with preventive maintenance to integrate your maintenance department
- Intuitive and easy-to-use mobile application supported on Windows, Android, and iOS
- Complete inspections and routes in areas with no internet or cellular connectivity
- Dashboard view provides real-time feedback to improve decision-making
- Build conditional logic to guide the user through the business process
- Set approvals for completed rounds to be logged

Benefits

- Ensure consistency and best practices are applied across the plant
- Complete routes more efficiently with higher data integrity
- Reduce errors associated with paper checklists and manual data reentry
- Drive reliability with early detection of equipment failure
- Gain insights into equipment health with trended reading history
- Increase communication between operations and maintenance
- Save time by building dynamic rounds with flexible scheduling
