WorkTech Time

PROMETHEUS GROUP

Prometheus WorkTech Time (WT Time) is an automated, flexible solution for collecting, tracking, managing employee time, attendance, and cost data. The solution captures and manages this data in a single system that integrates with your ERP, EAM, or CMMS, as well as other Prometheus Group solutions, such as STO Planner and the Prometheus platform.

WT Time validates data as soon as it is entered. The results are clean data, streamlined review and approval processes, and significant cost savings. In addition, WT time can be easily configured to your specific requirements.

Key Capabilities

All employee time, attendance, and cost data is uploaded in batches or entered interactively by individual employees into WT Time, simplifying data collection

Data validation occurs in real-time against company and union work rules and government regulations. This reduces the time required to identify and correct errors

Data is readily exchanged between WT Time and existing enterprise systems, such as Maximo, SAP, and Oracle, eliminating the need to enter data multiple times into multiple systems

Additional data is imported from enterprise systems for work orders, projects, and employee qualifications. WT Time verifies employee eligibility for assignment to projects and the availability of budget funds

Business rules can automatically populate related fields, based on other data properties, thus enhancing speed and accuracy

Managers can define business rules. In addition, they can lay out screens in familiar formats and use company terminology for field labels, all without expensive custom coding

Managers can review accurate, complete data on-screen in a timely manner and in the context of a work order or project. Projects stay on track, and review and approval processes are more efficient

Data is secured against unauthorized access. This is done through multiple user roles and permissions

Worker fatigue, which can lead to reduced productivity, increased costs, and violations of union and government rules can be handled in WT Time

"WT Time is a great system, and it is an indispensable cornerstone of the IT infrastructure at MWD."
- Metropolitan Water District of Southern California

"The use of WT Time has allowed our industries to reduce the labor required for collecting time by 25-50%."
- NASSCO-Earl Industries

Advantages

- Most flexible, configurable time and attendance system in existence

- One system for employee and independent contractor time and attendance data

- One-time data entry for payroll, EAM, ERP, CMMS, and HR systems

- Applies complex wage rules and allocates costs in a single entry

- Complete flexibility to define all role-specific rule sets

- Manages employee leave requests and approvals for predictable worker availability

- Mobile data entry available, including approvals, geolocation, and overtime availability
