

Prometheus WorkTech Fatigue Management module provides detailed labor reporting and analytics to ensure leave time complies with local, state, national, and union regulations. In addition, it increases safety by ensuring that worker fatigue is acknowledged and taken seriously by the entire organization. Like all Prometheus products, WorkTech Fatigue Management offers seamless integration with your EAM, ERP, and CMMS, as well as other Prometheus products such as STO Planner and Prometheus Planning & Scheduling.

What is Worker Fatigue?

Worker fatigue is physical tiredness and a mental state of impaired alertness, attentiveness, and cognition that leads to reduced coordination, decreased decision-making ability, slower reaction times, and a host of other issues.

Fatigue Risk Management Systems

It is well documented that workplace fatigue is a risk to safe operations. Implementing a fatigue risk management system (FRMS) is the best solution to the problem. Prometheus WorkTech Fatigue Management is effective, automated FRMS that is easily configured to meet the needs of your organization.

Key Capabilities

Access Control captures all relevant worker data, such as hours worked, recovery time, consecutive days worked, rotations, and more

Monitors shifts and time worked to ensure no fatigue violations occur

When fatigue violations do occur, the system informs the worker and supervisor of the issue, letting them know to block the worker from the job for that day

Identifies the best employees—by skill and level of non-fatigue—to work open or nonscheduled shifts

Generates a “fatigue score” for each worker, which can be used to predict when productivity might drop off and when the risk of an accident is increased

Advantages

- Reduces stress and fatigue levels for workers
- Minimizes the risk of accidents and litigation
- Improves worker alertness, health, safety, and productivity
- Enables you to easily comply with all union and government regulations, including the RP 755 guidelines
- Mobile data entry available, including hours worked and geolocation
