

Improve your manufacturing efficiency by using Prometheus Mobile Production Planning. Manage the full range of production processes in the palm of your hand. On-site workers can input data from the source rather than later in the day when they return to the office, giving full access to production data straight from the field. Boost data accuracy at each stage of the production lifecycle by integrating Prometheus Mobile Production Planning.

## Key Capabilities

Access production orders and associated documents from the field.

Record results of inspections straight from the inspection lot.

Enter collective time entries for seamless tracking of multiple orders.

Submit labor or machine production time, daily inspections, and other asset performance indicators from the field.

Input data from the source.

Streamline full range of production processes.

## Advantages

- Input notifications from any location.
- Eliminate trips back to the office by using mobile application on-the-go.
- Reduce potential errors with real-time data input.
- Increase efficiency of manufacturing process.
- Avoid tedious manual re-entry of data and increase wrench time.
- Boost communication across maintenance and operations.
