

Material Availability Coordinator (MAC)

Add-On for Prometheus Planning and Scheduling for SAP

PROMETHEUS GROUP

When maintenance technicians lack visibility into the right materials for a job or work order, their efficiency and wrench time are derailed. From contacting procurement to checking availability in storerooms, these manual steps outside the ERP cost the organization in lost labor time.

The Material Availability Coordinator (MAC) add-on simplifies the materials planning process by providing visibility into the status of any material at any time. From a work order to a purchase order, MAC aggregates the status of all materials necessary for job completion and bridges the communication gaps between maintenance, procurement, and the warehouse by adding visual status updates within your ERP.

Key Capabilities

Traffic light indicators alert personnel which materials are available

Just-in-time inventory improves planning and tracking of materials

Interactive fields allow access to standards ERP screens in one click

Auto-update work order status when all materials are available

Visibility of goods receipts and non-stock delivery dates

View all materials on a work order and those purchased directly through a PO

Advantages

- Improve schedule compliance and wrench time by ensuring parts are available when scheduled
- Gain insight into the procurement stage of each material in real-time
- Improve staging and kitting
- View material status for each operation from within the Prometheus Scheduling board
- Standardize and streamline communication of material demands between procurement, warehouse, and schedules to allow for lean inventory
