

Prometheus MPower for Maximo gives you the power to truly leverage your organization’s data for process improvement and superior work execution. The solution was designed to quickly resolve issues with existing data, allowing you to draw the insights you need, all while streamlining and minimizing repetitive and time-consuming activities.

With MPower, a team can perform functions that don’t exist in native Maximo and gains the flexibility to configure, combine, and create actions to give you the exact functionality you require.

Key Capabilities

Prometheus MPower for Maximo provides deeper visibility into your existing Maximo data, all while maintaining a single source of truth within Maximo.

MPower Actions

Perform functions that don’t exist in native Maximo. Similar to Maximo Select Actions, you have the power to configure, combine, and create new actions that give you the precise functionality you want

Add Meter Readings

Record meter readings for multiple assets on one screen, instead of against each individual asset

Multiple Databases

Query from multiple databases with NO knowledge of formal query language required

Layouts

Focus on what’s important to you with robust layouts that determine how data will be displayed and how it can be used

Advantages

Unlike some data solutions for asset data management, Prometheus MPower for Maximo lets you:

- Quickly pinpoint and access the exact set of records you need, eliminating the need for repeated searches
- Easily locate all linked documents
- View comprehensive work order information
- Combine all requested results in a single screen
- Publishes updates back to native applications
- Perform comprehensive data analysis quickly and accurately
- Create a layout that allows you to query Maximo and update it on one screen
- Mass update of all records as required

We partner with IBM to ensure our product is always compatible with Maximo
