IBM Maximo is the world leading EAM system and an overall exceptional business solution. However, when it comes to complex detailed scheduling and resource optimization some organizations prefer to use specialized best-of-breed applications such as Oracle Primavera P6. This is especially true regarding larger and more complex volumes of work such as plant shutdowns, turnarounds, outages, and capital projects that require sophisticated schedule logic ties and resource leveling capabilities.

Integrated Maintenance Planning & Scheduling

Maxavera provides a plug-and-play integration between Maximo and Primavera P6. Within just hours of installation, Maxavera will be intelligently transferring work orders, tasks, labor, crafts, PMs, equipment details, and other Maximo information to Primavera P6 where work can be scheduled and resources optimized. Maxavera then automatically sends relevant schedule updates, logic, and resource assignment updates back to Maximo, keeping the two systems in sync.

Prometheus STO Suite

- Scope Requests
- Planning Packages w/ Operations
- Materials
- Work Order Updates
- Permits
- Custom Fields

MAXAVERA®

Primavera

- Functional Locations and Equipment
- Notifications
- Work Orders/Networks
- Operations/Activities
- Materials, BOMs, and Inventory
- Projects
- Custom Fields

Key Capabilities

- Add the scheduling power of Primavera P6 to your IBM Maximo system.

- Get control of your capital projects.

- Improve plant shutdowns, turnarounds, and outages.

- Optimize resources and logic.

- Creates best-of-breed solution for maintenance and project controls.

- Eliminate manual data entry and increase data accuracy.

- Increase wrench time/reduce craft down time.

- Improve visibility.

- Reduce schedule backlog.

- Industry's most seamless, high-performance integration solution.
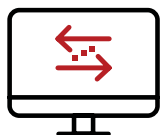

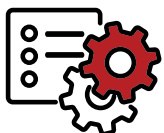

Features

Plug-and-Play Solution

Maxavera delivers more than 90 percent of your Maximo-Primavera integration requirements the day it is installed. It includes hundreds of predefined best practice field mappings, rules, transformation, logic and run-time options that have been refined through years of delivering real-world solutions to companies like yours all around the world.

Industry-Leading Functionality

Maxavera comes with hundreds of pre-mapped fields and transformation logic between Maximo and Primavera P6. Users can run their own customized ad-hoc integration jobs from Maxavera's web-based consoles or schedule jobs to run automatically.

Open Standards

Maxavera provides an end-to-end solution for Oracle eAM and Primavera P6 integration. Maxavera is open standards-based, and will run on any J2EE compliant application server platforms including Apache Tomcat, BEA WebLogic, and IBM WebSphere. You are free to choose the platform that is right for your enterprise—and protected if you change your mind in the future.

Version Freedom

Maxavera utilizes a loose coupling architecture. This makes Maxavera independent from either side of the integration equation (Maximo and Primavera) which eliminates the risk of version incompatibilities. With Maxavera you can mix and match versions as your business requires.
