

Planning Accuracy in STOs

Stephen Taylor and Coen Wessel

September 2, 2021

Context

How accurate can your planning be?

How accurate do you need to be?

- Time (must)
 - Timeframe ↓ = Room for error ↓
Accuracy must ↑
 - Timeframe ↑ = Room for error ↓
↑ Accuracy ↓
- Scope (can)
 - Scope ↑ = Accuracy ↓
 - Scope ↓ = Accuracy ↑
- Team (can)
 - Experience ↑ = Accuracy
↓ Experience ↓ = Accuracy ↑
- Software Tools (you need)
 - Number of tools ↑ =
Transparency ↓ Accuracy ↓

Tips

Templates

- Increase
 - Consistency
 - Predictability
 - Flexibility
- Reduce data entry time
- Use this room for decision making
- Maintain templates as part of the current project
- Goal: Capture *slightly more* info than you think you need!
 - Easier to remove unnecessary data, than add something that isn't there!

Data

- Only track data that holds its own
 - More detail is not a guarantee for greater accuracy
 - Don't track data for the sake of tracking
- Is Free text needed?
 - Works against consistency
 - Not ideal for reporting/analysis
 - Discuss data needs with team and stakeholders

People

- Knowledgable planners drive better results
- Hiring decisions are critical to success or failure
 - Communication is improved when people speak more than one expertise language
 - Add people who intermediate between departments and excel in communication

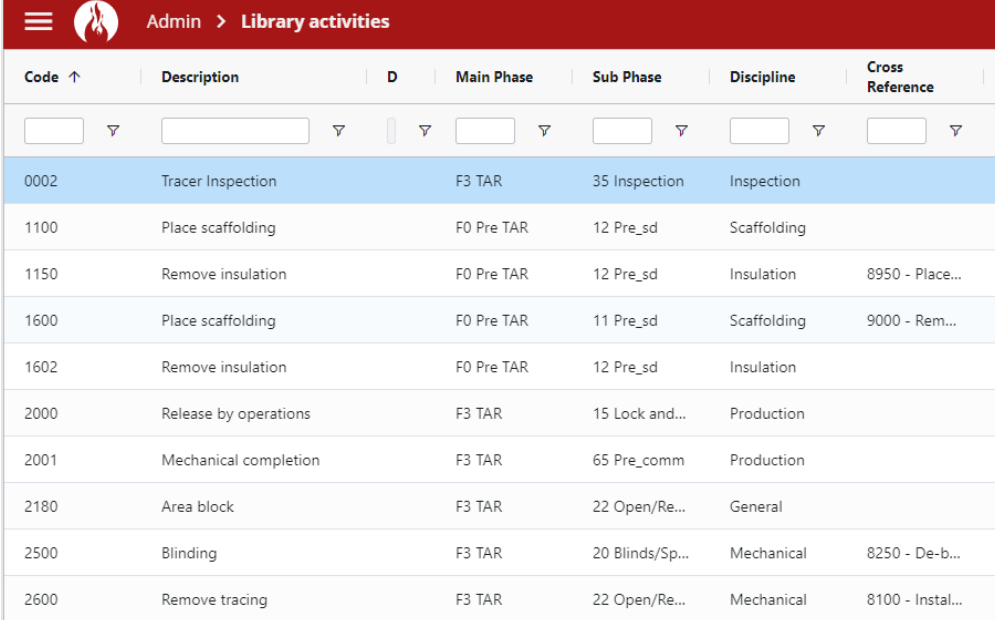

Tools

- Reduce the number of tools
- Migrate to a platform that natively integrates
 - “Export/Import” is not integration
- Use tools that are instinctive and easy to use
- Ensure that tools are oriented to drive users towards value added activities

Templates/Activity Library

- Templates -> Steps for an entire Work Package
- Activity Library -> Individual, repeatable steps that are commonly used

The screenshot shows the 'Admin > Library activities' page. It features a table with columns for Code, Description, D, Main Phase, Sub Phase, Discipline, and Cross Reference. The table contains 11 rows of activity data, with the first row (0002 Tracer Inspection) highlighted in blue.

Code ↑	Description	D	Main Phase	Sub Phase	Discipline	Cross Reference
0002	Tracer Inspection		F3 TAR	35 Inspection	Inspection	
1100	Place scaffolding		F0 Pre TAR	12 Pre_sd	Scaffolding	
1150	Remove insulation		F0 Pre TAR	12 Pre_sd	Insulation	8950 - Place...
1600	Place scaffolding		F0 Pre TAR	11 Pre_sd	Scaffolding	9000 - Rem...
1602	Remove insulation		F0 Pre TAR	12 Pre_sd	Insulation	
2000	Release by operations		F3 TAR	15 Lock and...	Production	
2001	Mechanical completion		F3 TAR	65 Pre_comm	Production	
2180	Area block		F3 TAR	22 Open/Re...	General	
2500	Blinding		F3 TAR	20 Blinds/Sp...	Mechanical	8250 - De-b...
2600	Remove tracing		F3 TAR	22 Open/Re...	Mechanical	8100 - Instal...

Correction Factors

- Account for uncertainty and complexities in activities
- Contractor/Contract
- Norm/Resource Level

Estimation: *Scaffolder* Show referenced activity

003 - Place scaffolding

Estimated hours	+	Calculated hours	*	Correction factor	=	Total hours
2.00		34.65		1.10		40.12

Number of workers: 1 Contractor: Excellent Scaffolding Contract: 20210331.19 - Contract for Scaffolding Co

Estimate

Calculations

Calculated hours	Qua...	Calculation main group	Calculation sub group	Norm	Memo	Correction factor
34.65	250	Scaffolding	Place scaffold	ST Independen...		1.1, 1.05

+ Step 1: Select a calculation main and sub group

Calculation main group: Scaffolding Calculation sub group: Place scaffold

Step 2: Select a norm

Norm: hrs: 0.12 / descr: ST Independent standing scaffold

Step 3: Select a correction factor and quantity

Correction factor: Heights from 30 - 50 Meters X High Likelihood of Lightning Strike X

Quantity: 250.0 Calculated hours: 34.65

“

In essence, your ERP is not a planning tool and Planning tool is not an ERP system. Invest in integration and get the best of both.

Best practice

- Close-Out / Lessons learned is not optional, Pay it Forward
- Estimate the time to document and improve as part of the project
- Invest in your templates
- Only track data that is needed

Benefits

- Validated data
- Right job plans
- Accountability / Visibility
- Consistent / Repeatable

Connecting people

- It's the people that make a project
- Software increases accuracy, decreases processing time
- Accuracy improves quality and trust
- Use time reduction on decision making
- Good decision making earns your money back
