The Prometheus Journey

S&V – A Prometheus Group Company

Focus on data supporting Digital Transformation

- Data Governance
- Data Migration
- Data Quality
- Data Insights

Expertise

- 15 years of innovation and expertise in data related services
- Experienced team focused on building smarter data management solutions
- Leveraging state of the art technologies like machine learning and artificial intelligence

SAP's official partner for the Middle-East region

A PROMETHEUS GROUP COMPANY

While good data can be your most strategic asset...

Bad Data Can Be Catastrophic!

Data you don't trust
Isn't data.

56%

of CEOs are concerned about the quality of their data.

8%

of organizations have reached “transformational” levels of maturity in data and analytics.

3%

of company data meets a minimum threshold for data quality.

PROMETHEUS GROUP

“

“If you don't have your data under control, you don't need SAP S/4HANA...You would just be analyzing wrong data faster.”

-Dr. Jürgen Sturm, former CIO at Siemens BSH group

PROMETHEUS GROUP

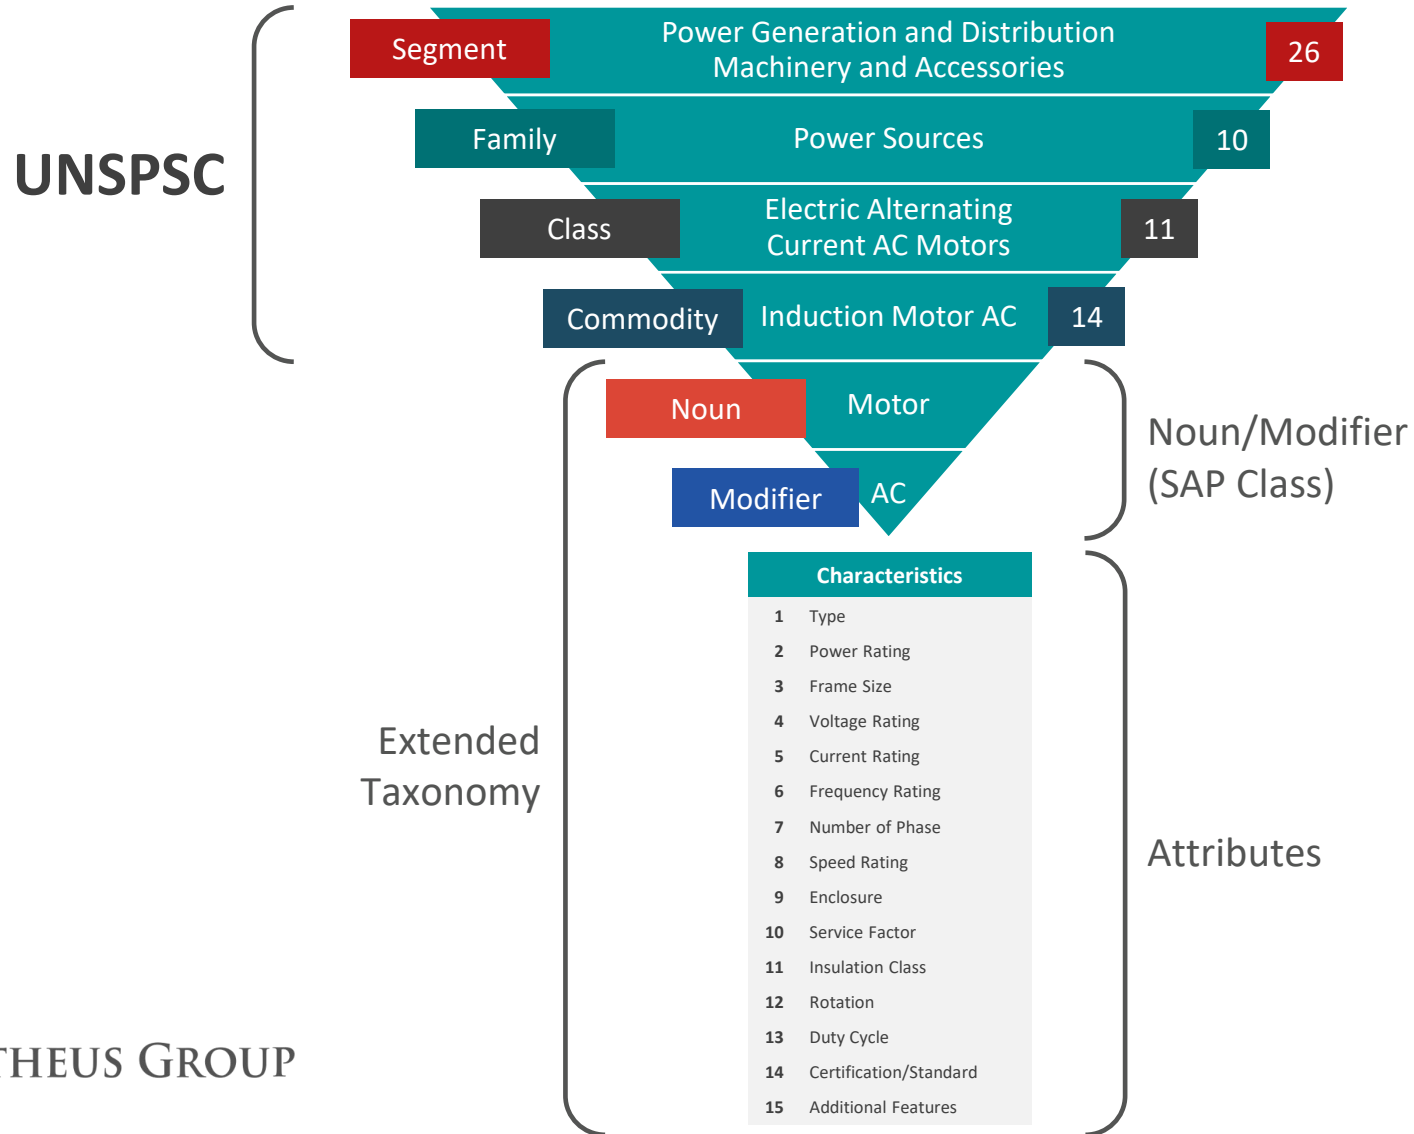

Step 1

Agree upon a 'definition of success'

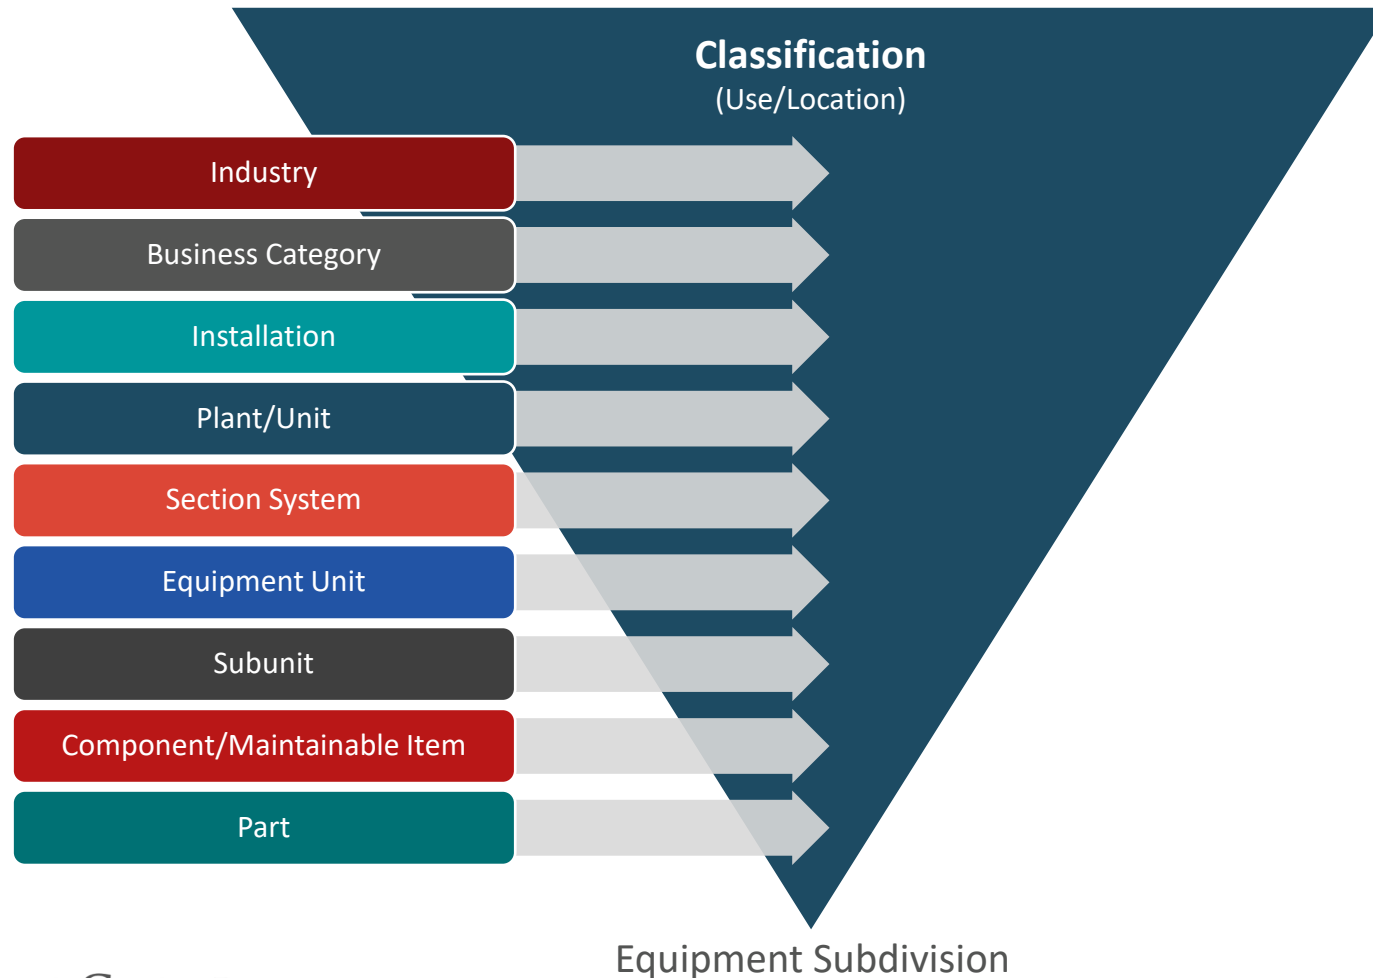

.... What is 'good' data?

Establishing the Foundation with a Sound Taxonomy

ISO 14224 defines the industry best practice for describing assets (digital twins)

Establishing the Foundation with a Sound Taxonomy

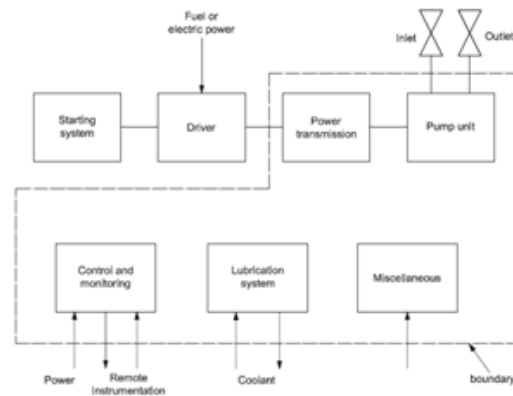

EQUIPMENT AND SPARES TAXONOMY CENTRIFUGAL PUMP		Version	1.0
		Release Date	05-02-2013

EQUIPMENT CLASS (NOUN)	EQUIPMENT TYPE (MODIFIER)	UNSPSC	ISO 14224
PUMP	CENTRIFUGAL	40151503	PUCE

Definition: A non positive displacement device, which utilizes a rotating element with a vane or blade assembly known as an impeller, in an enclosure as a means of transferring a liquid from one place to another.

Pump – BOUNDARIES (As per ISO 14224)

Establishing the Foundation with a Sound Taxonomy

EQUIPMENT AND SPARES TAXONOMY CENTRIFUGAL PUMP	Version	1.0
	Release Date	05-02-2013

Equipment Characteristics

Characteristics	Data Status	Data Type	Characteristic Description	UDM	Example	Suffix
					Values	
Type	M	TEXT	The type of the Pump based on construction/operation		SELF PRIMING	
Drive Type	O	TEXT	The type of drive which is coupled to the primary shaft		MOTOR	
Speed	M	NUM	The specific speed of the pump (impeller)	RPM	1800 RPM	
Case Material	O	TEXT	The surface treatment followed by the predominant base material of casing and material grades and/or specifications when available		SS ASTM A216 GR WCB	
Impeller Material	O	TEXT	The surface treatment followed by the predominant base material of impeller and material grades and/or specifications when available		SS ASTM A216 GR WCB	
Number of Stages	O	NUM	The numerical quantity of stages of the Pump		5	
Head Range	O	NUM	The measurement of total or dynamic head	MM, M	15 M	
Size	M	TEXT	The inlet and outlet size of the Pump		NPS 1, DN 50	
End Connection	O	TEXT	The type of end connection, along with the applicable standard		THREADED, ASME B1.20.1, RAISED FACE, ANSI B16.5	
Flow Rate	M	NUM	The volume of fluid delivered per unit of time	CFM, LPM	440 LPM	
Discharge Pressure	M	NUM	The rated pressure discharge of the Pump	PSI, BAR, KPSI	25 BAR	
Applicable Standard	O	TEXT	The applicable dimensional and referential standards of the Pump		API 610	
Additional Features	O	TEXT	Any other important features of the Pump			

Accurate Asset Information Aligned with ISO 14224 Standards

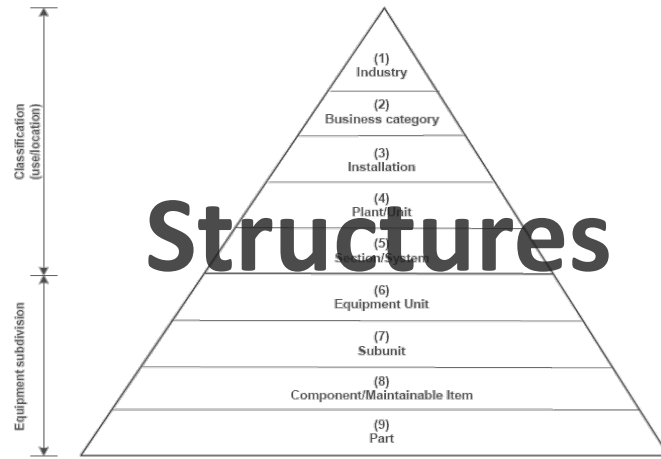

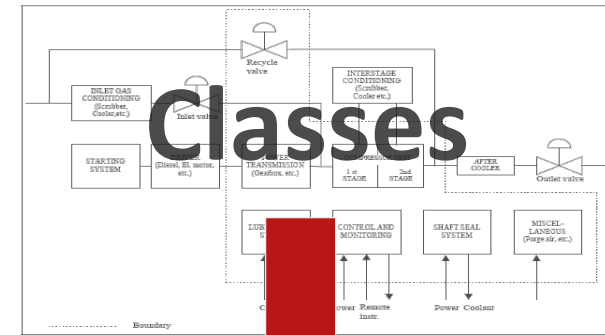

Figure 4 — Taxonomy classification

Equipment class		Equipment type	
Description	Code	Description	Code
Compressor	CO	Centrifugal	CE
		Reciprocating	RE
		Screw	SC
		Blowers/fans	BL
		Axial	AX

No.	Notation	Description
1.0	Design-related causes - general	Failure related to inadequate design for operation and/or maintenance, but no further details known
1.1	Improper capacity	Inadequate dimension/capacity
1.2	Improper material	Improper material selection
1.3	Improper design	Inadequate equipment design or configuration (shape, size, technology, configuration, operability, maintainability, etc.)
2.0	Fabrication/installation-related causes - general	Failure related to fabrication or installation, but no further details known
2.1	Fabrication error	Manufacturing process failure
2.2	Installation error	Installation or assembly failure (e.g. maintenance not included)
3.0	Failure related to operation/maintenance - general	Failure related to operation/use or maintenance of the equipment, but no further details known
3.1	Off-design service	Off-design or unintended operating conditions, e.g. compressor operation outside envelope, etc.
3.2	Operating error	Operator error, negligence, oversight, etc.
3.3	Maintenance error	Maintenance error, negligence, oversight, etc.
3.4	Insufficient maintenance	Failure caused by wear due to insufficient maintenance of the equipment
4.0	Failure related to management - general	Failure related to management issues, but no further details known
4.1	Documentation error	Failure related to procedures, specifications, drawings, reporting, etc.
4.2	Management error	Failure related to planning, organization, quality assurance, etc.
5.0	Miscellaneous - general	Causes that do not fall into one of the categories listed above
5.1	Unknown	No information available related to the failure cause

^a The data acquirer should judge which is the most important cause if more than one exist, and try to avoid the 5.0 and 5.1 codes.

Equipment class	Components					
Subunit	Power transmission	Compressor	Control and monitoring system	Oil tank with heating system	Shaft seal system	Miscellaneous
Maintainable item / Part	Gearbox/variable drive	Casing	Actuating device	Pump with motor	Reservoir	Base frame
	Bearings	Rotor with impellers	Monitoring Valves	Check valves	Pump with motor/gear	Piping, pipe support and bellows
	Coupling to the driver	Balance piston	Interstage seals	Valves	Filters	Control-isolation and check valves
		Radial bearing	Internal piping	Valves	Valves	Coolers
		Thrust bearing	Shaft seals	Internal piping	Valves	Silencers
		Internal piping	Valves	Internal piping	Valves	Purge air
		Valves	Antisurge system including recycle valve and controllers	Internal piping	Valves	Dry gas seal
		Piston		Internal piping	Valves	Seal gas
		Cylinder liner		Internal piping	Valves	Scrubber
		Packing		Internal piping	Valves	

Materials Supply Chain

BOMs

Step 2

Assess the Quality of Your Data vs. This Good Data Definition

Prometheus Data Health Assessment Process

The DHA is a quantitative, point-in-time analysis of your critical business data.

The process highlights the integrity of your data across four dimensions of data quality.

DHA leverages SAP Information Steward and Data Services software for information analysis and reporting to diagnose and illustrate data limitations.

COMPLETENESS

Identification of critical missing or invalid data in required master data fields

CONSISTENCY

Application of standard conventions, terms, formats, and abbreviations

CONFORMITY

Validation of data against internal, industry, or international standards

UNIQUENESS

Exposing potential and exact duplicates which exist within master data

Data Health Assessment Parameters/Examples

- **Completeness**
 - Attribute fill rate
 - Descriptions
 - Records
 - Linkages
- **Consistency**
 - Standard abbreviations and terms
 - Naming conventions
 - Coding standards
 - UNSPSC, ECCMA, eOTD, WITSML etc.
 - Logical linkages
 - Business Partner, Materials, BOM's, Equipment
 - Functional Locations etc.
- **Conformity**
 - Check against internal data dictionary
 - (Noun/ Modifier/ Attributes)
 - Compare data dictionary to industry standards
 - Industrial Taxonomy Standards
- **Uniqueness**
 - Exact Matches (EM)
 - Exact Substitutes (ES)
 - Functional Equivalentents (FE)

Our DHA Team evaluates client provided master data tables to present a cohesive output

Vendor Master Summary

6.74 quality score shows that we need to improve Vendor data for migration into SAP.

- Incomplete or missing values in 9% of records
- Industry standard special characters are present in 15.4% of records
- Significant inconsistency present in 52.1% of records
- Duplication present in 53.6% of Vendor records on expected evaluation criteria

Example 1: Item is present in master table in 3 countries USA, GBR & NLD

ITEM	DESCR	Item Group	CATEGORY	CODE	Product ID	COUNTRY	Inventory Business Unit
123A	500# MEM	FG_ZED	10463	4116155	123A-BB-4	USA	4030
123A	500# MEM	FG_ZED	10463	4116155	123A-BB-4	GBR	4030
123A	500# MEM	FG_ZED	10463	4116155	123A-BB-4	NLD	4030

Scope of Data Health Assessment - Customer

Performed standard DHA for customer records, customer KNA1 table details are described below:

Source System	Table Name	Total	Active	Inactive
SAP	KNA1	26,959	21,839	5,120

The Extraction criteria is –

- Identified active records based on LOEVM field is null in KNA1(Gen)
- Data Health Assessment will be done only for Active records

Key Observations and

MATERIAL_GROUP	ACTIVE	INACTIVE
NON_DANGEROUS_GOODS	79512	109549
DANGEROUS_GOODS	1660	457
TOTAL	81172	110006

Profiles were done on only active records in the table. Records marked inactive are ignored for profiling, but records with "DEL" or "DNU" in the name are not considered inactive for this exercise.

Consistency: ~77.2% inconsistent usage of acronyms and abbreviations in material descriptions are found, that are frequently used by end users. Search functionality is negatively affected when proper abbreviations are not used, and this leads to duplication as well.

Uniqueness: ~3.3% Similar/exact and potential duplication of materials found across different verticals of INGEVITY material master data. Unnecessary spending on materials that are already in stock under different material numbers.

Column: ITEM, Attribute: PATTERN

Value	Percent	Row Count
999999	22.8%	52695
<Other>	19.4%	44790
9999	18.8%	43481

Step 3

Assess the Business Impact of your Imperfect Data Quality

The Business Impact

Improved Maintenance Productivity

- Increase maintenance 'wrench-time'
- Added cycles for deferred maintenance
- Improved asset information context for informed troubleshooting & repair

Increased Operational Efficiency

- Reduce downtime from equipment failure
- Lower mean-time-to-repair
- Increase asset availability

Reduced MRO Supply Chain Costs

- Enables accurate prediction of spares needs
- Facilitates identification of obsolete inventory
- Minimizes expedited procurement

Decreased EH&S Risks

- Accurate, complete information enables informed decisions, reduces risks for maintenance staff and operators

Improved Auditability

- Improved financial accountability
- Ensures regulatory compliance
- Reduces product liability risks from quality

Achievement of Operational Excellence

- Enables achievement of top quartile performance through advanced maintenance techniques such as reliability-centered-maintenance, risk-based inspection, performance analytics

Ensuring accurate, complete asset master data can have a direct impact on reducing environmental, health & safety risks, improving operational performance and maintaining regulatory compliance.

A Typical Business Case For Data Quality Improvement

Obsolete Inventory Analysis

MRO Spares Balance Sheet	\$600,000,000.00
Annual Carrying Cost (25%)	\$150,000,000.00
MRO Spares Annual Spend	\$1,500,000,000.00

MRO Material Count	58,393
Materials on a BOM	29,914
Potential Obsolete Materials	28,479
% of Total	48.77%
Legitimate due to critical spares or lack of inventory	75.00%
Potential Impact	12.19%

Potential for All Locations	\$73,156,885.25
Annual Carrying Costs	\$18,289,221.31

Manufacturing Industry Client

- \$21B USD Revenue
- 54,000 Employees
- Benchmark data from 2 typical facilities

First Call Resolution (Work Orders)

Total Equipment Master Records	65,200
Total Criticality 9's and 5's	34,500
Criticality 9's and 5's with BOM	10,400
Current First Time Call Resolutions %	30.14%

Impact of Utopia BOM Initiative	
New BOM's added to Equipment	11,500
Criticality 9's and 5's with BOM	21,900

Future First Time Call Resolution % 30.14%

Utopia Impact 110.58%

Wrench time / Asset Availability Analysis

Total Equipment Master Reords	65,200
Total Criticality 9's and 5's	34,500
Criticality 9's and 5's with BOM	10,400
Current First Time Call Resolution %	30.14%
Equipment missing BOM's	21,100
Industry Average Wrench Time	40%

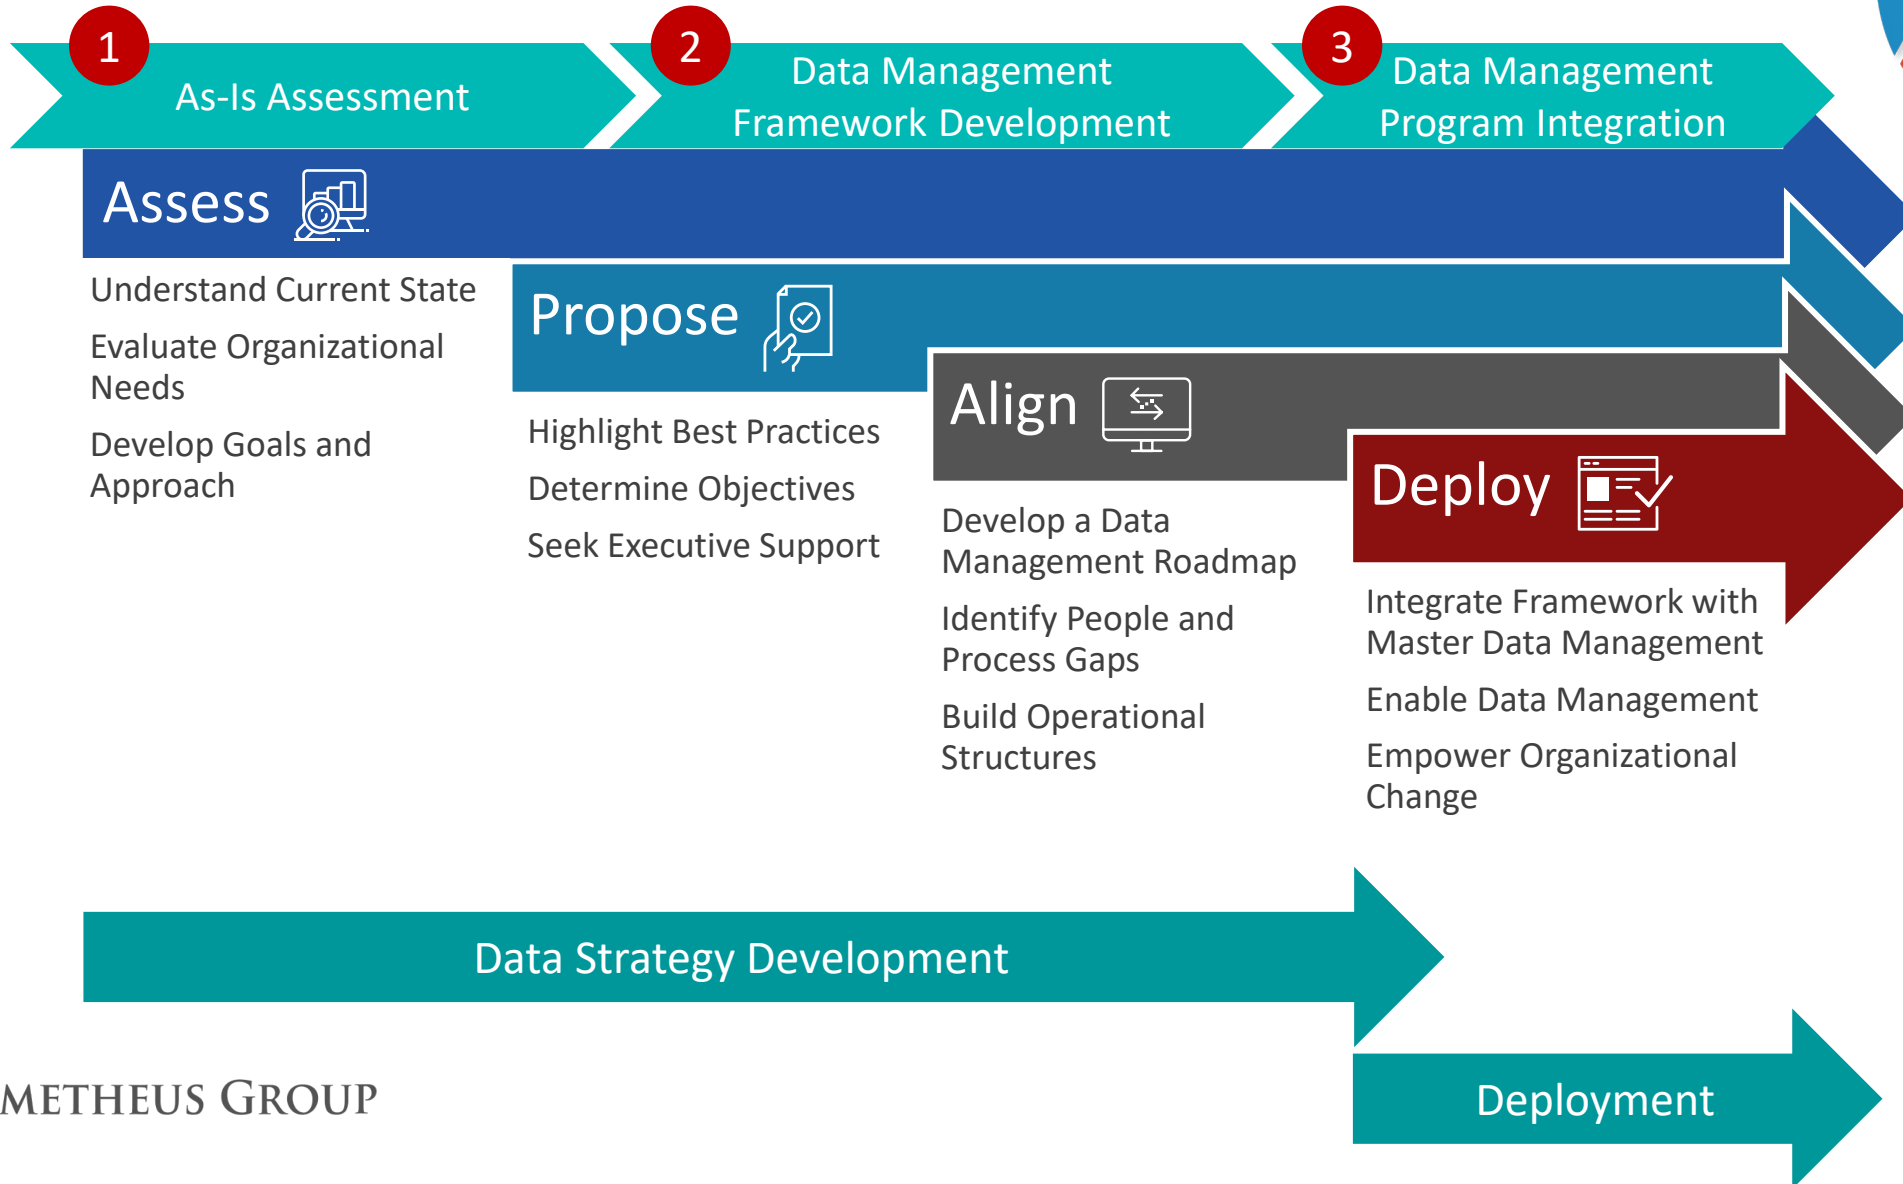

Impact of Utopia BOM Initiative	
New BOM's added to Equipment	11,500
Criticality 9's and 5's with BOM	21,900
New First Time Call Resolution %	63.48%
Equipment missing BOM's	12,600
Potential Wrench Time Improvement	47.72%
Potential Wrench Time	59.09%

Step 4

Develop a Strategy for Master Data Transformation & Management

Data Transformation & Management Strategy

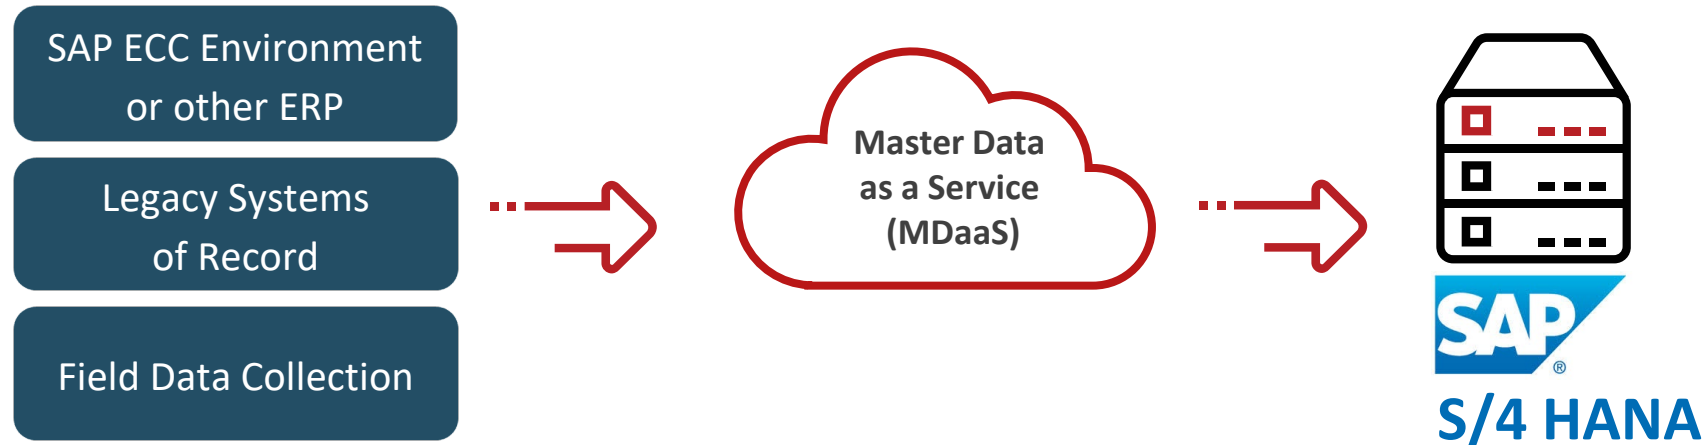

Step 5

Implement the NO-REGRETS STEP Data Transformation Methodology

The Prometheus Best Practice for Data Transformation / Migration to SAP S4

- Data extraction, cleansing, enrichment from legacy systems, documents & drawings and field data collection
- Maintain currency of legacy master data until SAP S/4HANA deployment
- Realize the business benefits of accurate master data immediately even before S/4 deployment
- Load accurate, complete master and transactional data upon S/4HANA deployment
- Maintain accuracy of master data in new S/4 HANA environment
